

Volunteers Wanted for a Research Study

Evaluation of Community Participation Efforts in Coordinated Specialty Care (CSC) Programs for Transition-Aged Youth with Early Psychosis

This study will develop and validate criteria for assessing the degree to which early psychosis programs (i.e., coordinated specialty care or CSC) are promoting a broad range of developmentally appropriate community participation outcomes for program participants.

We are looking for 20 members who are interested in forming a national advisory group to aid us in using a stakeholder-driven approach to identify and validate criteria that can be used to evaluate CSC programs in terms of their community participation-orientation.

Advisory group members must be at least one of the following:

- A transition aged-youth with early psychosis who has been/is involved with a CSC program (must be between the ages of 18 and 30)
- A family member of transition aged youth who has been/is involved with a CSC program
- A CSC thought leader

*Must have access to computer and videoconferencing technology

Participants will be involved in study for 9 months over the course of a 20 month period and can earn up to \$600 for full participation in advisory group activities.

If you are interested in participating in this study, you may contact research staff at **215-204-1699** or at tucollab@temple.edu
